

Cristóbal Torres

Senior Full Stack Developer | React, TypeScript, Node.js | Architecture & Modernization

ctmelgoza@gmail.com | [linkedin.com/in/ctmelgoza](https://www.linkedin.com/in/ctmelgoza)

SUMMARY

Senior Full Stack Developer and Technical Lead with 14+ years of experience in software engineering, building and modernizing production web applications. Specializes in React, TypeScript, Node.js, NestJS, API development, and backend architecture, with a strong track record of modernizing legacy systems and evolving monolithic applications into modular and microservice based architectures.

Experienced in building platforms from the ground up, leading technology migrations, designing reusable component systems, and establishing engineering standards across development teams.

CORE SKILLS

Frontend: React, TypeScript, JavaScript, Vue, Angular, HTML, CSS, SCSS

Backend: Node.js, NestJS, Express, PHP, Laravel, REST APIs, API Development, Microservices

Architecture: Software Architecture, API Design, Microservices Architecture, Micro Frontends, Modular Architecture, Legacy Modernization, Reusable Component Systems

Cloud & DevOps: AWS, CI/CD, Git, Automated Testing

AI & Development Tools: Claude, Kiro, AI Assisted Development

Engineering: Code Quality, Technical Debt Reduction, Software Development Practices, Agile / Scrum

Databases: MySQL, SQL Server, PostgreSQL, MongoDB

EXPERIENCE

Senior Web Developer, Necodex

Remote | October 2025 to Present

- Refactored 2 production APIs from Koa to NestJS, redesigning their architecture and introducing consistent development practices to improve maintainability.
- Led the migration of 2 frontend modules from Vue 2 to Vue 3, modernizing approximately 24 components as part of a 4 developer team.
- Extracted the Sales module into a Micro Frontend within a 17 module purchasing platform, enabling independent upgrades without coupling changes to the main monorepo.
- Automated testing workflows, increasing confidence in code changes and improving development reliability.
- Proactively identified technical debt and architectural improvements, driving refactoring initiatives beyond assigned feature work.

Technical Lead, Raffoom Digital

Remote | October 2021 to October 2025

- Architected and built a raffle platform from the ground up with a 4 developer team, ultimately supporting 7 companies across 4 customer facing raffle websites.
- Designed the platform architecture, including customer facing applications, back office systems, CI/CD pipelines, data structures, and the core data dictionary.
- Created reusable component libraries for the back office and customer facing applications, providing a consistent foundation across multiple products.
- Built a reusable raffle component system and CMS, enabling customers to integrate raffle functionality and manage landing pages without requiring code changes.
- Established development guidelines and coding standards across the project, defining consistent patterns for architecture, implementation, and maintainability.

Technical Lead, Rank Interactive

Remote | October 2018 to October 2021

- Drove the modernization of 12 production gaming platforms, migrating 8 casino and 4 bingo sites from a legacy PHP monolith to NestJS, Express, Angular, and microservices.
- Designed the shared framework and skin system used across all 12 platforms, supporting multiple brands and game providers from a common technical foundation.
- Decomposed the monolith into domain specific services, personally designing and implementing email and casino reward services, including database changes and stored procedures.
- Collaborated with DevOps to introduce redundant AWS deployments, supporting platforms serving up to approximately 9,000 daily users, with peaks of approximately 15,000.
- Promoted to Technical Lead after proposing and contributing to the migration strategy, while delivering a regulatory Reality Check Web Component under a single weekend deadline.

Senior Web Developer, CENFES A.C.

Mexico City | May 2016 to October 2018

- Architected and rebuilt 4 applications used to manage public transportation operators in Mexico City, replacing legacy Perl implementations with PHP, Laravel, and Vue.
- Modernized legacy Perl applications by creating reusable templates and moving business logic into Laravel services, allowing Perl to focus on HTML rendering while data and functionality were delivered through modern services.
- Introduced version control and separate development and staging environments, reducing reliance on production systems and lowering server resource usage.

Web Developer, Telmex A.C.

Mexico City | August 2010 to May 2016

- Developed Drupal based internal event management systems for races, raffles, and training courses, and implemented a dedicated development environment.
- Developed and maintained WordPress websites for *Asociación Telmex* and *ASUME A.C.*, supporting their public facing web presence.

EDUCATION

Bachelor of Science, IT Solutions (Coding, DBA, Networking), Universidad La Salle Cuernavaca A.C.
